

**A. AMENDMENTS TO THE SPECIFICATION**

[0029] Encapsulated within the soft material 210 is a generally rigid material. The generally rigid material forms a bracket frame. The bracket frame 222 will typically be fabricated from steel 2.0 mm in thickness. The bracket ~~frames~~ have frame has fixedly connected thereto L-shape bracket supports 226, provided to allow for the attachment of intake solenoids 230 or exhaust solenoids 232. The exhaust solenoid 232 has a housing 234. The housing 234 encircles a solenoid cell 236 which in turn encircles a solenoid plunger 238. The plunger 238 is spring biased in a lower position by a solenoid spring 242. The solenoid plunger 238 is pivotally connected to an L-shape lever arm 250. The L-shape lever arm 250 is pivotally connected with the solenoid casing at pivot point 254.
